

SAVE FARMING FROM THE 'GREEN NEW DEAL'

BRITISH FARMERS MUST IMMEDIATELY UNITE AGAINST THIS MADNESS

• Farmers everywhere are now destined to lose their vital role as food providers and as trustees of the UK landscape.

• Defra's 2020 Farming for the Future document carries the messages that 'zero carbon', 'robots', and 'greater efficiency' are all the way forward so that farming can be digitalised whilst at the same time creating synthetic vegan food production and destroying good and productive land with urban-styled land conservation programmes. And, to cap it all, farmers will increasingly be no longer allowed to hand farms down to their children.

• The dual process of increased centralization, coupled with trading policies based on the demands of supermarkets, has led to farmers being squeezed out of their traditional roles as upholders of national food security and sovereignty, with food coming direct from the farm.

• Within this programme, the promotion of a vegan diet is prominent. Livestock will no longer play any real part within an agricultural policy that's designed solely to deliver zero carbon. And let's not forget that flatulent livestock and even earthworms have been deemed to contribute to global warming by the so-called 'climate experts'

**WE NEED TO DE-CORPORATISE BRITISH
FARMING IMMEDIATELY AND SO RESTORE
SANITY AND COMMON SENSE TO OUR FOOD
PRODUCTION.**

FARMERS

Now is the time to join together and fight for our collective right to farm our land without gross interference by the State. We must NOT rely on Unions to support us. Only by uniting at a grass roots level - and by bringing consumers with us in our commitment to grow/raise honest food - can we establish a future for our way of life and our right to pass-on our traditions to those who come after us!

CONSUMERS

Support your local farmers. The one's who produce 'real food'! They cannot remain independent without your involvement in buying 'direct from the farm'! Your purchasing decisions are vital in ensuring the survival of 'real food' and 'real farmers'.

AN ALERT FOR BRITISH FARMERS!

HARDWICK ALLIANCE
FOR
REAL ECOLOGY
(HARE)

FRIENDS AND FELLOW FARMERS

Please read this leaflet very carefully indeed. You will probably be unaware of this, but traditional Family-run Farms and other closely related livelihoods are now under direct threat like never before.

The British government has an agenda to completely re-structure the way farming works in the UK – and, to make matters worse, this is all part of a massive corporate global plan that hardly anyone knows anything about.

The plan is based on something called The Green New Deal for Nature. It is a completely fake conservation strategy to tackle so-called Man-made Global Warming by reducing CO2 levels. Please note that Climate Change is real but it is completely natural and has been happening for millions of years – ask any geo-archaeologist! CO2 is actually the gas of life – we need more, not less!

This global plan (also called UN Agenda 2030) has been drawn up by unelected and unaccountable individuals including the private Central Bankers (through their virtually unknown Bank for International Settlements), The World Bank and the European Commission – all of them seeking to make huge profits from carbon taxing.

Page 2

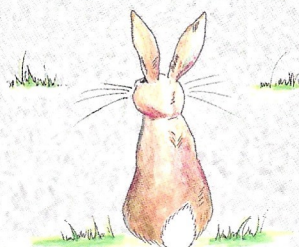

As part of all of this, we're now starting to see Veganism and the re-wilding of productive agricultural land being deliberately promoted by our government and the mainstream media with the deliberate intention of unbalancing and deeply undermining British farming.

This long-term plan will of course be sold to you as a benefit to 'save the planet' and tempting subsidies will initially be given...but then farms will begin to disappear and to be replaced by something we have not been consulted about and would almost certainly not agree to.

This Orwellian plan for our future first came about in 1992 at the UN Earth Summit in Rio. The final goal for this global agenda of 'sustainability' is to have most of the world's population living in heavily controlled and high surveillance urban environments called 'Smart Cities'.

Places that use Artificial Intelligence and 5G to control almost every aspect of our lives so as to make sure we are always 'good and responsible' citizens carrying out the diktats of the State...just as people do today in the modern Smart Cities of Communist China.

Page 3

The future of British farming, as given in the APWG Report Food and Drink Sector 2020, envisages government-controlled "Mega Farms" that are run by artificial intelligence, using electric vehicles and tractors whilst developing insect biomass as replacement protein. There will be no room at all for traditional farmers! Check this out:

<https://cutt.ly/hardwick>

(This will take you to the Report viewable as a PDF document)

Indeed, this report says that farms will no longer be inherited by families, as these 'farms' will have to be highly robotic and run by government trained technocrats.

If this all sounds crazy, it is!!

However, the legislation needed for this madness is quietly being put in place. This is not ten years down the road, it is happening right now, today!

There is even a move to amend the current agricultural policy to allow CRISPR gene editing via the back door which will effectively annul all organic farming.

And with the 'COVID-19' pandemic giving us all the 'New Normal', please be aware of the threat of "Zoonotic Diseases" which could suddenly be triggered to distress British farming beyond all recognition. We're up against psychopaths.
